The external civilized world felt further away than ever before but since the material of the hab was so thin, you were closer to the natural world than ever before. What else did you hear loudly?

I remember the sound of us playing ping-pong. We had a ball but didn't have a ping-pong table, nor rackets. We used a plastic office table and our slippers instead. But it was fun and very loud.

That's right. Another example was one of the crew members who had been isolated in their cabin for days. There is no privacy in the cabin. She locked herself in her language. But we could all hear it - □ x

The NASA InSight Rover had not heard what Mars sounded like. The first rover that dug into the Martian surface to hear what Mars by that time. It was the first time we hadn't heard it yet.
